

MINIMUM STOCK GRID FOR CLASS 5 STORES ONLY

These minimum stock levels are required of all authorized and applicant grocery vendors. An inability to obtain or continue to stock these minimum amounts and minimum varieties in any category at the store site will result in application denial, or in the case of authorized grocery vendors, sanction points. Refer to the WV WIC Approved Food List for approved foods and approved packaging sizes. During the on-site store review performed as part of the application process, a State WIC representative will check your stock levels to ensure these minimum levels are present on the date of the review. **Do not return the application until the store has all the stock on the minimum stock grid.**
